

Reverse Bloodline Pathways
 Grey Fell Pony Broodstock Lines
 (2017-2022)

* Window of analysis: Pedigrees of all grey North American Fell Ponies that produced foals from 2017-2022.

* Since grey is dominant, it is fairly easy to look at a pedigree and see the specific line that handed down the grey gene with exception to one stallion who has 2 grey parents.

* A methodical independent research (2023) identified 153 ponies that have produced foals in North America during the 'window of analysis' period. Within this window, 6 grey stallions and 9 grey mares were identified and pedigrees analyzed for the contributing grey line. Interestingly, all 15 grey lines landed with Mountain Flash II.
